

On Site Compliance Testing

provided by Equipe Training

Introduction

Equipe can provide a cost effective solution to assist contractors to comply with their Health and Safety, Technical and Quality obligations. In addition to the training courses available from Equipe Training, we also offer an on-site compliance testing service comprising :

- SPT Calibrations
- LOLER Inspections

SPT Calibration Tests

Equipe, using its state of the art SPT Analyzer+, provides calibrations and certification compliant to the requirements of BS EN ISO 22476-3 : 2005 and 22476-2 for dynamic sampling drop weights.

The SPT Analyzer can be rapidly deployed and brought to the location of the test equipment on site. Equipe's experienced engineers will then set up the equipment and provide instant analysis to the site staff.

LOLER Inspections

Equipe can provide Competent Persons to carry out Thorough Examinations of lifting equipment, cable percussion rigs, dynamic sampling rigs (where required) and rotary rigs,

A Thorough Examination is required for all lifting equipment on a six monthly basis and the rigs are required to be inspected annually (unless specified otherwise by the manufacturer).

Equipe will carry out this service in accordance with LOLER and will provide a Report of Thorough Examination where equipment complies.
