BRITISH DRILLING ASSOCIATION

IN-HOUSE MANUFACTURING
IN OUR STATE OF THE ART MACHINE SHOP

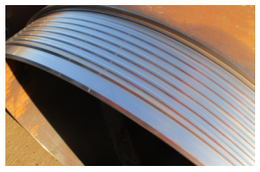

GEOTECHNICAL DRILLING, GEO-FOUNDATION & SITE INVESTIGATION EQUIPMENT

John Lawrie Tubulars UK, is one of the largest suppliers of steel tubular products in the UK and accross Europe. We manufacture a range of equipment in-house to support the various aspects of cunstruction and geotechnical sectors.

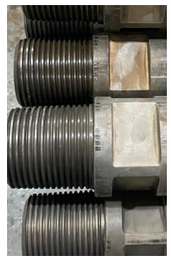

Our purpose built state of the art machine shop houses seven semi-automatic CNC Lathes and a friction welder for the manufacture of drill rods and associated products. Bespoke products are available, our friendly and experienced team are excellent problem solvers, so if you need something specific get in touch.

We manufacture a wide range of ground investigation, and foundation engineering including:

- BS 4019 Casing
- Geo-Foundation (Piling Casing)
- Casing Advancing Systems
- Site Investigation Casing

For every tonne of our re-purposed steel tubulars used there is a 97.21% CO_2e saving over the production of new products from prime steel.

97.21% CO_2e SAVING

THE QUEEN'S AWARDS FOR ENTERPRISE: SUSTAINABLE DEVELOPMENT 2022

HELLO AND WELCOME

We're thrilled to have you join us at the UK's Premier Geotechnical Conference and Exhibition, Geotechnica 2023, held at the Warwickshire Event Centre. Over the next two days, you'll be immersed in a world of innovation, expertise, and invaluable networking opportunities.

Over the course of two exciting days, Geotechnica 2023 will bring together industry leaders, visionaries and young geo-professionals to create an environment that we know will be ripe for collaboration and knowledge sharing. Our geotechical conference features talks from experts in their fields and we hope their presentations on the latest updates to Standards, innovative projects and cutting-edge technologies help to broaden your horizons and ignite your passion for geotechnics.

The exhibition for this year is jam-packed, with representation from all corners of the industry leaving the exhibition halls bursting at the seams. From clients such as National Highways and The Coal Authority, to large consultancies like Arcadis, through to contractors like BAM Ritchies and Geotechnical Engineering, specialists like 1st Line Defence and manufacturers and suppliers such as RS Hydro - every link in the supply chain is here this week. Make sure you take a thorough tour of the halls and the outdoor paddock to soak in all of the experience and knowledge that our exhibitors have to share.

We extend our heartfelt gratitude to our sponsors whose support has made this event possible. A special thank you to our Platinum Sponsors: Casagrande UK, John Lawrie Tubulars, MGS and TerraRoc. We are grateful for their unwavering commitment to advancing the geotechnical industry via their support for Geotechnica.

We also extend our appreciation to our Gold Sponsors: Davis Trackhire, GenAir, Just Drill, Rocscience, Seequent, Strata Geotechnics, as well as our Silver Sponsors: Fielders, GEOLABS, Robertson Geo, Soil Engineering and Structural Soils. Their contributions have been instrumental in ensuring the success of Geotechnica 2023.

Last but not least, we would like to acknowledge our Bronze Sponsors: European Geophysical Services, Geoterra, Leca UK, and TerraDat. Their support has been invaluable in creating an exceptional event experience.

We sincerely hope you have an enjoyable experience at Geotechnica 2023 and we look forward to meeting and greeting you all during the course of the show.

The UK Air Compressor Rental Specialists

GEOTECHNICAL CONFERENCE

Unlike other large-scale events that feature 'geo' content, Geotechnica has always been entirely focussed on the UK geotechnical and geoenvironmental industry and in particular the ground investigation sector.

This year Geotechnica focusses on driving the industry forward and promoting new methods, innovation and new technologies. The event will provide a platform for collaboration, geotechnical community engagement, collective learning, networking and discussion. Along with the UK's leading geotechnical exhibition and trade show, we are delighted to welcome you to our technical conference, covering important aspects such as the new Eurocode, new technologies and the latest innovations. We would like to thank our speaker line-up for their contributions and hope all attendees take the time to digest the content and enjoy the opportunity to learn from some of the industry's leading specialists.

Conference Programme — Wednesday 5th July 2023

10:00 – 12:45 Session 1

10:00 - 10:15 Julian Lovell - **Managing Director, Equipe Group**

Presentation Title: Welcome to Geotechnica 2023

10:15 - 11:00 Keynote Address:
Dr Andrew Bond CEng FICE - **Director, Geocentrix Ltd & Chair, B526**

Andrew Bond has played a key role in the development of the 2nd Generation of Eurocode 7, first as Chairman of the Eurocode 7 committee from 2010-2019 and now as a member of the Editorial Group writing the final text. In 2015, he updated the UK Codes of practice for Foundations (BS 8004) and Retaining Structures (BS 8002) to align them with the 1st and the 2nd Generation Eurocodes. He is co-author of the book Decoding Eurocode 7.

Presentation Title: Getting ready for the 2nd Generation Eurocodes

11:00 - 11:45 Dr Mike Spence - **Director of Science for the UK Geoenergy Observatories and Science Lead for the Cheshire Observatory**

Mike's academic background is in geology and geochemistry and his work in industry and academia has encompassed a wide range of subsurface science including in-situ monitoring of natural attenuation and wetland processes, design and operation of in-situ bioremediation systems, spatiotemporal modelling of plume development, analysis and reporting of EU refinery water usage. In his current role at the British Geological Survey he is leading the design and development of Geoenergy Observatory in Cheshire.

Lucy Ford - **Associate Director, AECOM**

Lucy has been working within the Environmental Solutions business with over 15 years of experience in ground Investigation delivery and contaminated land. She is also a Chartered Geologist and an accredited NEC3 & 4 Project Manager. Major projects include Thames Tideway Tunnel (including secondments with Thames Water), Luton Airport, Lower Thames Crossing and UKGEOS.

Sean Leach - **General Manager, Marriott Geotechncial Drilling**

Sean has over 35 years of experience in ground investigation and remediation associated with major infrastructure projects. He is a Chartered Geologist and Hydrogeologist and has extensive experience of managing multidisciplinary teams to deliver complex projects. Major projects include the Channel Tunnel Rail Link, HS1, HS2, secondment to DEFRA Emergency Response Team during the Foot & Mouth outbreak and Deep Drilling & Hydrotesting at Sellafield. Also various projects for clients in Europe, North Africa, China, South Africa and South America.

Presentation Title: UKGEOS

11:45 - 12:00 Julian Lovell - Managing Director, Equipe Group

Julian is Managing Director of the Equipe Group who are the UKs leading training and vocational assessment provider. He is a Past Chair of the AGS, Chair of the AGS Procurement of Ground Investigation Steering Group, Chair and Lead Author of the Yellow Book Revision Working Group, Chair of the JIWG Buried Services Group and Member of the BDA Training and Education Sub Committee. Julian has been involved in the geotechnical industry and is an active author and contributor to industry operational and safety guidance. He is also a UK Expert on TC182 WG4 which has revised and written ISO and CEN standards on geotechnical sampling and training and competency requirements for personnel working on geotechnical projects. He has been involved in the development of Level 2 and Level 3 qualifications in land drilling and is currently leading an industry working group developing a new qualification for laboratory and field technicians.

Presentation Title: Effective procurement of ground investigation

12:00 - 12:45 Panel Discussion

Neil Parry - Director, Geotechncial Engineering

Neil is a chartered Civil Engineer and SiLC with 32 years' experience working for major contractors and consultants on many different projects including major infrastructure, military, demolition and remediation schemes, latterly in the ground investigation sector. Neil is a former AGS Chair.

James Codd - Associate Director Ground Engineering, AECOM

James is an Associate Director at AECOM where he has a technical focus on geotechnical risk and asset management, infrastructure resilience, climate change adaptation, and the use of digital systems and tools in ground engineering.

Dr Philip Smith - Associate Director, Geotechnical Consulting Group

Dr Smith is a geotechnical engineer with 27 years of experience, including in research as well as practical industry applications. He has particular experience and expertise in site investigation, including for geotechnical and geoenvironmental aspects.

12:45 - 14:00 Lunch and Networking

14:00 - 15:45 Session 2

14:00 - 14:30 Prof. Paul Nathanail - Technical Director, LQM

As a Chartered Geologist and Specialist in Land Condition (SiLC), Professor Paul Nathanail's professional work revolves around the investigation, assessment and remediation of contaminated sites and the regeneration of brownfields. Paul is one of the world's leading contaminated land management specialists, with over 30 years' experience in environmental consultancy, innovation and expert witness. Paul's expertise includes developing decision support tools for regulators and industry, developing spatial and non spatial environmental risk assessment tools and developing tools to facilitate sustainable brownfield regeneration.

Presentation Title: PFAS

14:30 - 15:00 Steve Forster - Director, Remedia Group

& Chair – Joint Industry Working Group on Asbestos in Soil and C&D Materials

Steve has over 35 years' experience in the investigation, assessment and management of asbestos in buildings and on land. He authored CAR-SOIL (CL:AIRE, 2016), industry guidance interpreting the Control of Asbestos Regulations 2012 as applied to contaminated land, in conjunction with the HSE. He co-authored Assessment and Control of Asbestos in Soil Part 1: Protection of personnel working on ground investigations and Part 2: Protection of personnel working in geotechnical and geoenvironmental laboratories (AGS, 2021). He developed and delivers (CL:AIRE) industry-focussed training courses for professionals working within the brownfield land sector, with over 1500 candidates having received training since 2016.

Presentation Title: Asbestos Risk – Are you keeping your staff safe?

15:00 - 15:30 Steve Wilson - Technical Director, The Environmental Protection Group

Steve has spent the past 30 years trying to reduce over conservatism in ground gas risk assessment. He has contributed to most of the recent UK guidance. He is a Chartered Engineer, a Society of Brownfield Risk Assessment (SoBRA) Accredited risk assessor and a UK Registered Ground Engineering Adviser. Steve is one of the authors of the CL:AIRE Good Practice for Risk Assessment for Coal Mine Gas Emissions.

Presentation Title: Vapour sampling

Conference Programme Thursday 6th July 2023

10:00 – 12:45 Session 1

10:30 - 11:00 Julian Lovell - Managing Director, Equipe Group

Julian is Managing Director of the Equipe Group who are the UKs leading training and vocational assessment provider. He is a Past Chair of the AGS, Chair of the AGS Procurement of Ground Investigation Steering Group, Chair and Lead Author of the Yellow Book Revision Working Group, Chair of the JIWG Buried Services Group and Member of the BDA Training and Education Sub Committee. Julian has been involved in the geotechnical industry and is an active author and contributor to industry operational and safety guidance. He is also a UK Expert on TC182 WG4 which has revised and written ISO and CEN standards on geotechnical sampling and training and competency requirements for personnel working on geotechnical projects. He has been involved in the development of Level 2 and Level 3 qualifications in land drilling and is currently leading an industry working group developing a new qualification for laboratory and field technicians.

Presentation Title: App Revolution: Enhancing Efficiency, Accuracy & Insights in the Geo Sectors

11:00 - 11:30 William Bond - CPT & Geotechnical Account Manager, Royal Eijkelkamp

William Bond is a specialist in Cone Penetration Testing (CPT) with a keen focus on data quality. William is currently the CPT & Geotechnical Account Manager at Royal Eijkelkamp and has previously worked as a Project Manager, a Technical and Regional Manager and an independent consultant specialising in the acquisition of high-quality CPT data.

Presentation Title: Latest Developments in CPT Equipment Including SonicCPT

11:30 - 12:00 Chris Morrison - Business Development Manager, Geosense

An Instrumentation & Monitoring specialist, Chris shares experience from both a specialist contractor's and a manufacturer's perspective. This includes recent UK major projects and iconic international monitoring schemes.

Presentation Title: Progressions within Instrumentation & Monitoring

12:00 - 12:30 Dr. Thamer Yacoub - CEO & President, Rocscience

Dr. Thamer Yacoub, P.Eng. Ph.D., is the CEO & President of Rocscience. He has more than 25 years of experience in geomechanics numerical modelling. Thamer has a wide range of experience in several numerical modelling applications, covering topics including slope stability analysis, settlement and foundation analysis, surface and underground stress analysis. He also has extensive experience in probabilistic analysis of slopes.

Presentation Title: 3D Numerical Modelling in the Geotechnical Industry

12:30 - 12:45 Q&A and Discussion

SEEQUENT

CONQUER ANY GEOTECHNICAL PROJECT WITH CONFIDENCE

Seequent subsurface solutions enable seamless communication across your project workflow.

OpenGround®

Collect and manage geotechnical data in a centralised, cloud-based platform for 24/7 accessibility.

leapfrog | WORKS

Gain subsurface insight using dynamic, 3D geological modelling designed for civil engineering and environmental projects.

CENTRAL

Integrate and manage geoscience data and models from a centralised, auditable environment.

GeoStudio

Analyse slope stability, groundwater flow, and environmental challenges.

PLAXIS®

Analyse complex excavations, foundations, tunnels, and other infrastructure projects.

STRATA GEOTECHNICS

SPECIALIST RAIL GI SERVICES

One of the UK's largest, most experienced and respected specialist on-track geotechnical investigation contractors.

SPECIALIST HIGHWAY GI SERVICES

We carry out detailed geotechnical investigations across the UK, including smart motorways.

SPECIALISTS IN RESTRICTED ACCESS PROJECTS

Providing difficult access and ground protection solutions for our standard Cable Percussion rigs and offering our unique VETRAK Restricted Access CP Rig for restricted access sites.

SONIC DRILLING

Our latest rotary sonic technology enables one rig to drill both superficial deposits and rock, with an equivalence in capability and sample recovery as that from the traditional combined Cable Percussion and Rotary technique.

FOUNDATION TESTING

We use various pile testing solutions including, Integrity, dynamic and static load testing, integrity testing using sonic logging, parallel seismic testing to determine pile length and pile instrumentation to measure various parameters including strain, temperature and inclination.

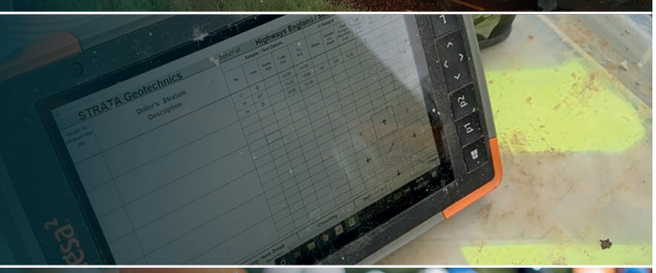

INTEGRATED DATA MANAGEMENT AND DATA ACQUISITION SYSTEMS

We provide robust data which gives the necessary information to enable the relevant follow-on trades to minimise subsequent costs and/or programme implications.

DRIVING INNOVATION AND EMBRACING TECHNOLOGY

Investing in innovative digital technology has enabled us to become an industry leading Ground Investigation contractor providing high quality service levels to our clients.

TRAINING, COMPETENCE AND QUALIFIED PERSONNEL

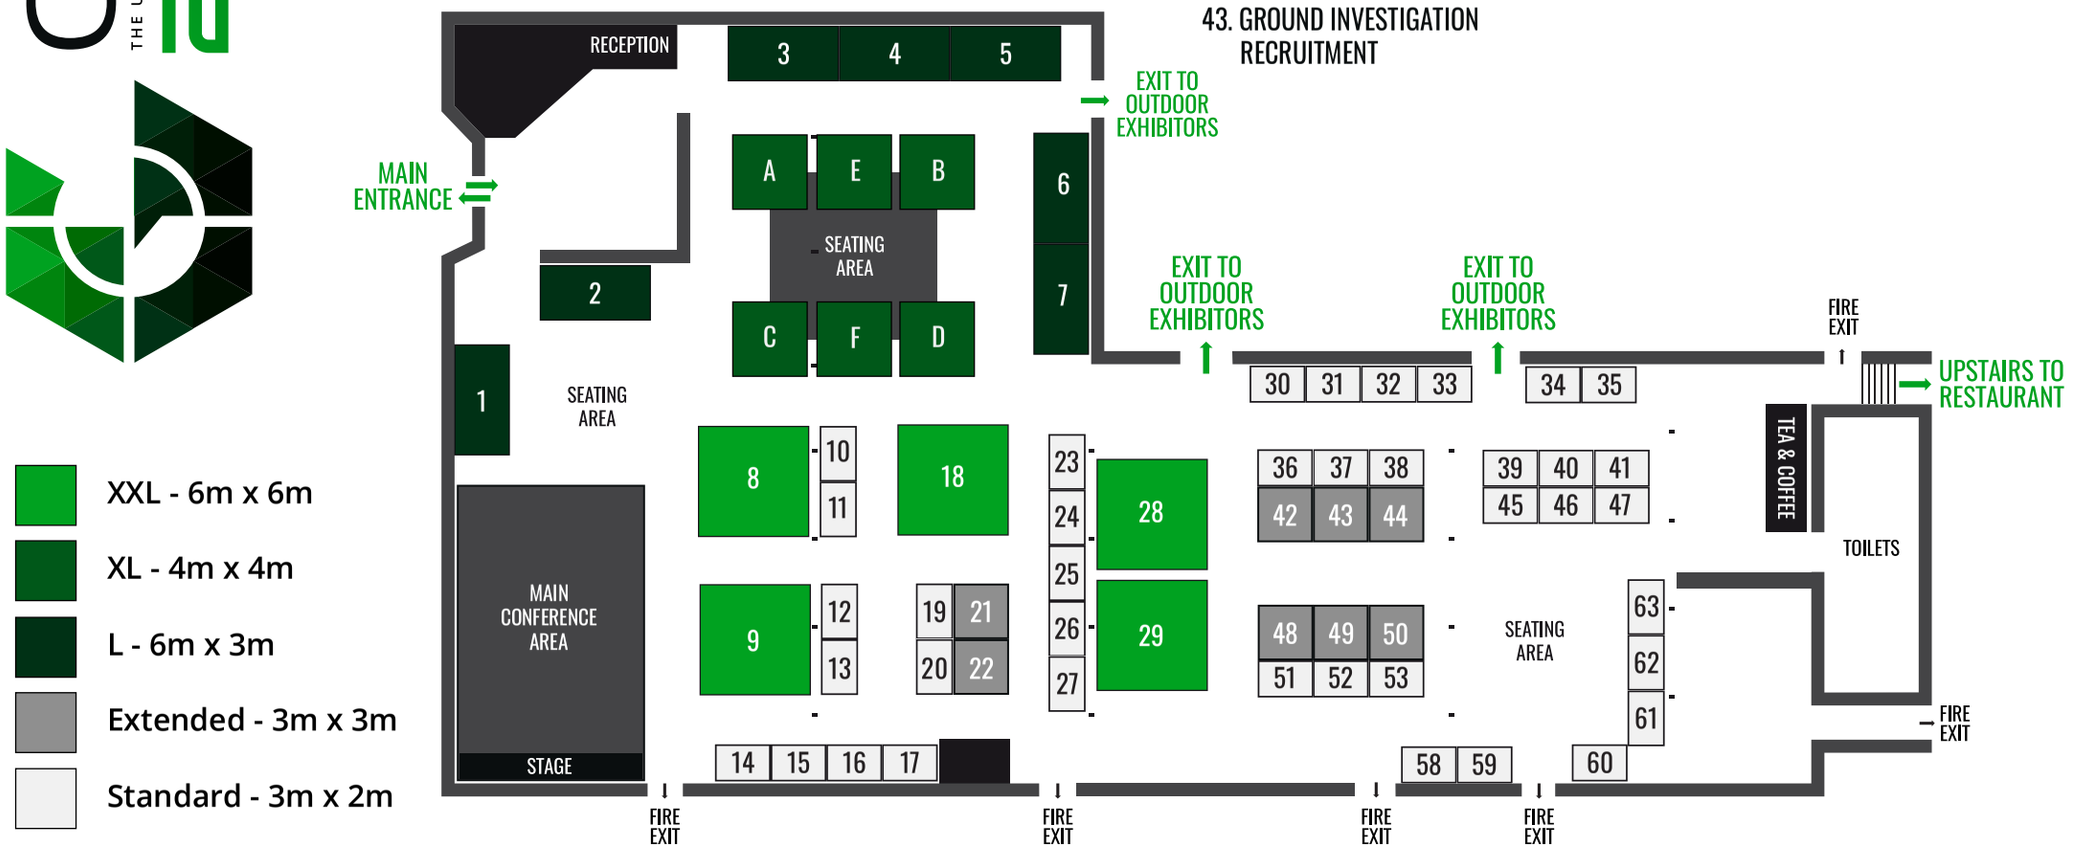

We are members of the British Drilling Association (BDA) and the Association of Geotechnical Specialists (AGS), with all drillers trained to NVQ Level 2 in land drilling.

Stand	Company	Description
A	national highways	National Highways is the government-owned organisation charged with operating, maintaining and improving England's motorways and major A roads. It operates information services through the provision of on-road signage and its Traffic England website, provides traffic officers, to deal with incidents on its network, and manages the delivery of improvement schemes to the network.
B	ARCADIS	Arcadis' multi-award-winning Site Evaluation & Restoration (SER) team delivers pragmatic, innovative and sustainable solutions to their client's most significant "geo" environmental challenges. Whether in liability risk management, transaction support, engineering design or property regeneration their team's approach blends technical excellence with practical know-how to provide cost-effective, bespoke solution. Their People First initiative also makes for a great place to work, with supported career development that can span technical skills, commercial management and business development in a balance that suits; furthermore, their flexible working arrangements and support network allow for a rich, diverse and inclusive environment that welcomes challenge and continually seeks to improve. This tight knit team delivers the highest quality output and strives for technical excellence across multiple disciplines.
C	STRATA GEOTECHNICS	For over 20 years Strata Geotechnics (formerly VE Geotechnical Services) has provided high quality Ground Investigation and Pile Testing services throughout the UK. Focusing on the production of quality data, Strata maintain an enviable track record of being at the forefront of technology and innovation which includes the development of bespoke drilling rigs, digital data, sonic drilling technology and automated static load testing.
D	ROBERTSON GEO Unlocking Your GeoData	For over 40 years Robertson Geo has pioneered the development of wireline logging instrumentation technologies and techniques. The comprehensive range of geophysical logging solutions and software is developed and built at its North Wales manufacturing and calibration centre. On-site test facilities include a 100m test borehole, calibration blocks, ovens and autoclaves, used for testing complete probe assemblies, providing a full suite of traceable calibration and quality assurance data. Experienced field engineers are available to conduct borehole logging services in any location worldwide. Equipment can be purchased or rented, offering a range of flexible options for calibrated wireline logging data of proven quality and reliability.
E	DYWIDAG	DYWIDAG - providing leading geotechnical engineering solutions including products, technical advice, testing, surveying, and monitoring. Infrastructure construction and management is achieved using full lifetime designs and materials with up to 120 design life. Applications such as Soil Nailing, Micro-piling and Ground Anchoring appear in many sectors including deep basements, cofferdams, bridge abutments, slope stabilisation and heritage structures, quarries, Rail, Highways, Coastal protection, Rivers & Canals. DYWIDAG core values are to provide, SAFER, STRONGER & SMARTER solutions for Infrastructure. The DYWIDAG comprehensive approach provides technical advice based on the requirements of the whole solution not just the individual components. By providing a specialist elemental technical service, DYWIDAG solutions provide value engineered proposals, technical certainty, safe solutions, and long-term asset management. DYWIDAG is a global organisation with the ability to draw on experience from around the world. They also understand the sensitivities and differing demands of local markets, the environment and sustainability.
F	The Coal Authority	The Coal Authority has been working to make a better future for people and the environment in mining areas for more than 25 years. They operate more than 75 mine water treatment schemes across the UK, which protect and enhance the natural environment by treating 128 billion litres of water every year – preventing 4,500 tonnes of iron solids entering Britain's watercourses. They operate as one of the largest procurers of drilling operations, ground investigations and borehole constructers, all with the aim to perform their statutory duty to restore the environments affected by mining.
1	LMCL	LMCL were formed in 2004 as a geological, geotechnical and survey consultancy. They are specialists in obtaining high quality surveys by remote techniques and using those surveys to design earthworks and retaining structures. They own and operate several long-range high-resolution LiDAR scanners, a mobile LiDAR system that can be handheld, backpack wearable or vehicle mounted, several drone systems (multi-rotor, fixed-wing and VTOL) that carry a wide variety of survey and environmental mapping sensors, and Unmanned Surface Vessels (USVs) for remote bathymetric and environmental surveys of water bodies. They have worked extensively throughout the UK and overseas and have undertaken projects for a wide range of industries including Quarrying, Mining, Construction, TV & Film, Property & Estate Management, Local Government, and the Ministry of Defence. LMCL were HBO's provider of point-cloud surveys for the Game of Thrones Visual Effects Department and are providing surveys for the worldwide Extreme E rally.
2	Eijkelkamp Fraste UK	Eijkelkamp Fraste UK – Bringing the best of both companies to the UK. Eijkelkamp Fraste UK was established in 2019 and is co-owned by Royal Eijkelkamp & Fraste. Based in The Netherlands, Royal Eijkelkamp produce & supply products & services, offering a one-stop solution for Soil & Water Research. Royal Eijkelkamp are also the worldwide producer & supplier of Sonic Drilling Rigs, Sonic tooling & Sampling solutions. Fraste, based in Italy, have over 50 years of design and construction experience. This gives Fraste a strong & stable position in the international drilling industry. Designing & manufacturing quality Drilling Rigs that last have secured growth and supply around the world. Bringing the best of both companies to the UK, Eijkelkamp Fraste UK was created. They are innovative, forward thinking and committed to offering a wealth of knowledge, unrivalled after sales service & support.

Stand	Company	Description
3 - 5	MGS	MGS will be showcasing their extensive range of products used in ground investigation, mineral exploration, water well construction, ground source heat recovery and groundwater monitoring. New this year sees the introduction of the Aquaread LeveLine range of groundwater monitoring dataloggers together with telemetry and data visualisation software. Also, try their new Drill Factor Challenge to win a great prize. In line with the BDA's "UK Net Zero Strategy - Drill Back Greener", MGS are pleased to introduce a completely new and innovative developing technology called Microbial Polybiotics. This technology can be used in conjunction with specialist Bioplastics to produce not only a carbon negative product but a controlled in-situ biodegradable pipe. Other products such as Coreliner could be made to be compostable thus eliminating the need for landfill. Prototype samples of EnviroLine-PB wellscreen and Coreliner-PB material will be available to view and touch together with a presentation explaining the technology.
6	SOIL ENGINEERING	Soil Engineering is one of the UK's leading geotechnical contractors with a proven capability in all elements of ground investigation and stabilisation. Soil Engineering are a long established leader in the UK Geotechnical Sector, delivering both Ground Investigation and Drill and Grout services from three bases across the country. They are capable of undertaking a wide range of investigative and remediation techniques.
7	1ST LINE DEFENCE	1st Line Defence are the UK's foremost providers of unexploded ordnance (UXO) risk mitigation services, addressing and providing solutions to the risk posed across the UK from unexploded bombs and munitions related to current and former military land use and aerial bombing.
8	EQUIPE GROUP	Incorporating Equipe Training and Equipe Geosolutions, the Equipe Group are the hosts of Geotechnica 2023. They help Geotechnical and Land Drilling companies raise standards, grow and prosper. Offering a vast array of services, their expertise ranges from specialist geotechnical health and safety training for on-site staff, to developing innovations to make life on site easier and your workflow smoother. Some of Equipe's services and products include Soil and Rock Description Workshops, on-site data collection tool KeyLogbook, RhinoCorebox, On-Site Photoboards and 2018's GE Technical Innovation Award winning rig guarding system - SAFER G.
9	GenAir	GenAir - Specialists in Compressed Air Hire - A refreshing alternative in the supply of compressed air rental and mobile accessories. With a management team boasting over 140 years' experience in the industry, supported with one of the largest hire fleets of compressed air systems, desiccant dryers and ancillary equipment in Europe. For even the most urgent of requirements their rapid response and customer service is the best in the business. With both industrial and oil free formats, GenAir compressors are offered to include TIER 5 LEZ COMPLIANT and ZERO EMMISSIONS ELECTRIC DRIVE to provide the most efficient solutions.
10	Landmark Geodata	Landmark Information has been creating, analysing and adding value to geospatial data for over 25 years. It combines data, mapping and technology to help customers in a range of sectors to streamline their operations, deliver insights and reduce risk. This includes customers in environmental consultancy, construction and development, conveyancing, surveying, lending, utilities, real estate management, estate agency, land acquisition, insurance and government markets. It can also apply sophisticated risk models and workflow solutions to its data and mapping enabling customers to make smarter decisions and to carry out tasks more efficiently and effectively. As experts in environmental due diligence and risk assessment for land and property, Landmark supplies a range of services from desktop screening analysis and reports through to onsite consultancy work and complete risk management. The team is also involved in a number of exciting projects relating to innovations in climate change risk assessments and adaptation reporting.
11	SoilCloud	SoilCloud is a web application allowing the digital transformation of geotechnical engineering. More than 1000 users already use the application around the world. Geotechnical engineering activities collect a lot of data. This data has a high value for the companies which own it but it is rarely used to it's full potential due to the lack of dedicated tools and software. SoilCloud is specifically designed for geotechnical engineering and allows users to manage, thanks to a user-friendly interface, the potential of all collected data. SoilCloud covers a large range of in-situ (SPT, CPT, Dynamic probe tests) and laboratory tests (classification, triaxial tests, consolidation tests). However, SoilCloud is not only a data viewer. Indeed, with the application you can access specific geotechnical tools such as a CPT analyzer or a 3D modeling tool. Soilcloud's ambition is to gather all the tools the geotechnical engineer required daily, all in the same place.
12 & 13	rshydro	RS Hydro is a multi-disciplined instrumentation company, founded in 1997, providing specialist expertise to tackle technological issues facing clients that need to measure, monitor and report groundwater, water quality, level and flow accurately and safely. They are proud to be the exclusive representatives in the UK and Ireland for the best in class manufactures of loggers, dip tapes, water quality sensors, samplers, flowmeters and remote monitoring solutions from Solinst, Eureka Water Probes, Proteus, Siemens, Outpost Wildeye and Teledyne Isco and provide national installation and service and custom engineering solutions.
14 - 17	SEEQUENT	Seequent builds world-leading subsurface software, helping create a better understanding of the earth to ensure a better world for all. They are constantly evolving at the forefront of technology to transform how geo-professionals work, eliminating barriers to understanding by connecting software, teams, and the tools they need. Every day, their customers in over 100 countries work to develop mineral resources more sustainably, design and build better infrastructure, protect the environment, source renewable energy, and help resolve historical challenges such as groundwater contamination and ageing infrastructure. Seequent's integrated earth modelling, geo-data management, and team collaboration software enables them to see a more complete picture of the earth: because with more understanding comes better decisions – for people and the planet. Headquartered in New Zealand with global reach, Seequent is the subsurface software company within Bentley Systems. Together, they are helping build a more resilient world.

Stand	Company	Description
18	John Lawrie TUBULARS	John Lawrie Tubulars is the leading specialist in the supply of repurposed steel tubulars for use as piling in the construction and civil engineering sectors. Following significant investment in assets, they became a 'one-stop-shop' for their construction and structural industry clients, offering services to the mining, water wells and minerals industries too. Their in-house manufacturing services include the production of friction welded drill rods for rotary and DTH purposes, rotary percussive casing, SI Casing (BS 879), and exploration casing (BS 4019), Rope threaded piling casing and Klemm threaded casing advancement systems. They also manufacture helical piles, pipe and fabrication for rail and highways and top driven piling. Focused on driving a circular economy, they invested in a bespoke life cycle assessment which details that for every tonne of their repurposed tubulars used there is a carbon dioxide equivalent (CO2e) saving of 97.21% over the production of new manufactured prime steel products.
19	GEOSENSE	Geosense is a leading UK manufacturer and global supplier of Geotechnical Instruments and data acquisition systems used worldwide for safety monitoring of elements such as tunnels and metros, deep foundations, infrastructure, mines, dams and geohazards. Geosense specialises in Vibrating wire and MEMS technology as well as offering many other types of instruments for all applications. Utilising their expertise, clients have installed their sensors across more than 75 countries on some of the world's largest and most prestigious projects.
20	LIEBHERR	Liebherr specialises in production of construction machines and has established itself as an innovation leader worldwide. The portfolio of construction machines from their Liebherr Werks Nenzing (LWN) factory includes crawler cranes (less than 400t capacity), duty cycle crawler cranes, plus piling and drilling rigs. Digital solutions and services for the construction site of the future complete the product range, to provide safer, more efficient and productive integrated machines. For deep foundation engineering, they offer cutting-edge piling and drilling equipment via their LB, LRB and LRH series rigs, as well as attachments including vibrators, hammers or slurry wall cutters. Their machines are ideally suited for the construction of cast-in-place piles and slurry walls, or for the installation of sheet piles and soil improvement. Liebherr is a market leader for electrification of their construction machinery portfolio. The launch of their Unplugged range of crawler cranes and drilling rigs provides a zero emission alternative without any limitations, or performance reduction vs conventional diesel powered machines. They continue their commitment to zero emission development launching new models to market throughout 2023 and beyond.
21	geotechnical	Established in 1961, Geotechnical Engineering are the UK's largest, privately owned, independent, ground investigation contractor, providing quality geotechnical and geoenvironmental data throughout the UK. They deliver an extensive range of ground investigation services for the purpose of informing on the physical and engineering properties of the ground (soil & rock), and any potential contamination issues.

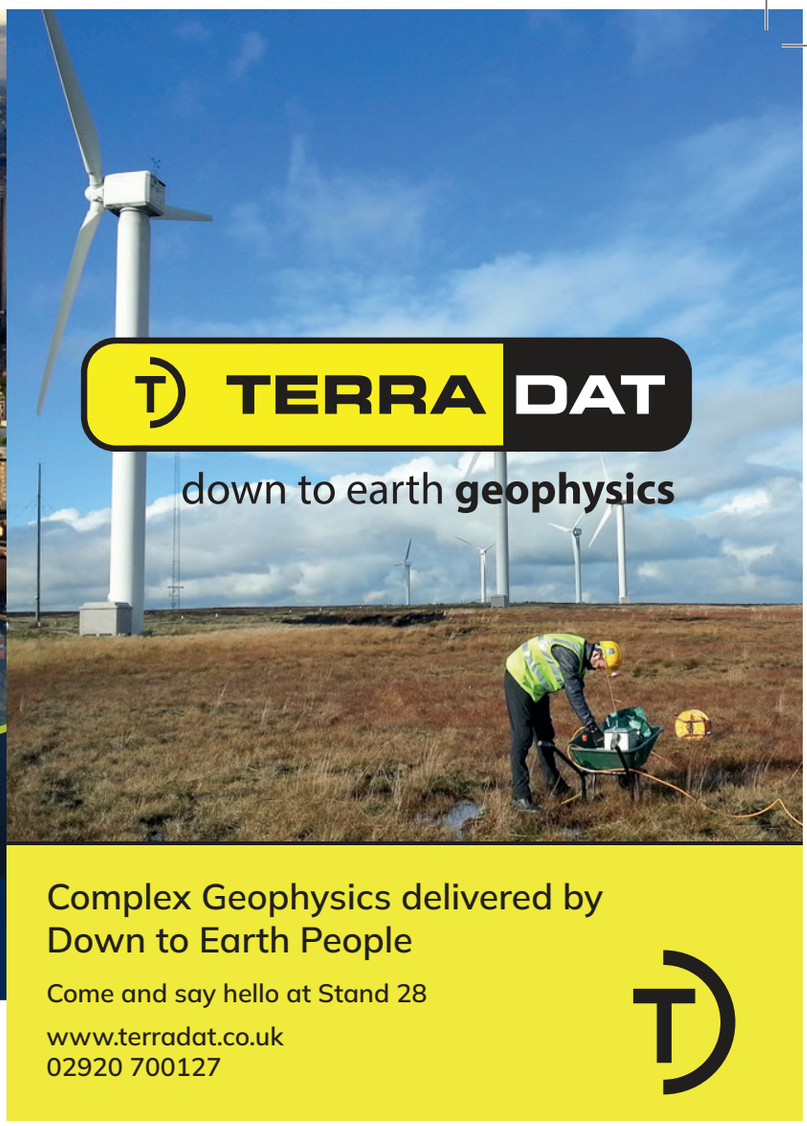

Stand	Company	Description
22	LANKELMA	Lankelma are specialists in geotechnical investigations including cone penetration testing (CPT), a fast, efficient, and reliable method for profiling the geology and deriving geotechnical properties. In addition, they offer specialist techniques such as seismic, pressuremeter, MIP and magnetometer. Their Combifloat jack-up platform set-up with drilling, CPT and seabed equipment facilitates expert nearshore investigations. Lankelma's experienced site teams travel nationwide and internationally to deliver professional, cost-effective ground investigations and produce high-quality data. Lankelma strive to overcome site challenges with unique solutions and innovative technologies led by their highly qualified technical team. Their first-class resources are suitable for working on a variety of sites – greenfield, brownfield, rail environments, basements, flood/sea defenses and intertidal zones to name a few. Lankelma are a leading provider of CPT ground investigations
25	Leca®	Leca® UK are the UK's leading lightweight aggregate supplier. Leca® LWA is used in many civil engineering and geotechnical applications from road and rail embankments to bridge backfills and salvaging retaining walls. A natural material and just 15% of the weight of traditional fill materials Leca® LWA is an easy choice to reduce over-burden, delivery programmes or structural costs; it is an inert, multifunctional material which has been in production in Scandinavia since the 1930s and is now widely used throughout the UK and Europe. With its self-draining properties the material is also a winner for green roofs, sports stadia, landscaping and horticultural projects. Moreover Leca® LWA has proven that it is just as useful in Biofilters, Swimming Pool backfills and even arrestor beds on high speed motor racing tracks, test facilities and airfield runways.
26	afitexinov GEOSYNTHETICS UK LTD	AFITEXINOV UK LTD, an AFITEX group company, is a specialist manufacturer/provider of geosynthetic solutions and materials for over 30 years. Their services are focused on applications such as soil/structural drainage, water barrier linings and soil reinforcement solutions. Their focus industry sectors are in geotechnical applications in public works, environmental projects, residential developments and mining activities. AFITEXINOV develops industry leading & innovative solutions using the latest design methods/technical papers, offering geosynthetics solutions and products with huge emphasis on the environmental and commercial impacts. Based on their successful supply extending to millions of square metres of geocomposites, geotextiles & geogrids installed throughout the world since 1992, AFITEXINOV responds to specific challenges faced by earthworks and geotechnical specialists in consulting firms, project managers, contractors, landfill operators, mining companies, specialist installers...etc. Discover how they can participate in your projects on www.afitex.com and come to meet them on Indoor Stand 26.
27	EOD CONTRACTS LTD	Since 2002, EOD Contracts has been providing innovative, cost- effective explosive ordnance risk mitigation to the geotechnical and construction industries through onsite attendance and office-based reporting. Their engineers all hold NATO recognised qualifications, CSCS cards and are experienced in their various fields. More recently, they have diversified their operations into the utility clearance world and use fully-qualified 'Pro Qual level 3 Utility Mapping' surveyors during their PAS128 mapping and clearance works. Using leading edge cable locators and GPR technology, they aim to go above and beyond for their clients while logging all their work for inclusion in permits or for QAQC purposes. GPS marking-out and recording of positions form part of the clearance process and this data can be exported to their clients in various formats. They aim to supply a one-stop solution to your utility and EOD needs at sites across the UK.

Stand	Company	Description
28	EUROPEAN GEOPHYSICAL SERVICES	European Geophysical Services provide geophysical logging, imaging and video surveying of boreholes, adits, shafts and wells for the water, mineral, environmental and civil engineering industries. Their expertise and experience ensure a high quality service resulting in them being the preferred contractor to several major utilities, government agencies and engineering companies.
	geoterra	Geoterra are geospatial engineers and consultant chartered land surveyors who specialise in above and below ground geo-referenced surveys. They work very closely with consultant engineers, contractors and drilling operators in the civil engineering and building sectors to provide a high quality service to clients and have almost 40 years' experience working on major infrastructure projects. Geoterra utilise a variety of innovative solutions to obtain accurate survey data upon which engineering decisions can be made and help in reducing the risk of the unknown; what lies beneath. They offer their clients unique solutions for their various requirements throughout the UK. They also provide expert witness services for construction litigations and are often called upon to give independent advice as consultant engineers and surveyors.
	TERRA DAT down to earth geophysics	TerraDat is a specialist and independant geophysical survey company. Both contracting and consulting services are provided by its experienced staff to the geotechnical, civil, mineral, hydrological and environmental industries. it owns the largest range of geophysical survey equipment in the UK private sector. TerraDat's main aims are to offer a high quality service to its clients while promoting the wider use of geophysical science in approprate environments.
29	SKELAIR GROUND ENGINEERING & ROCK DRILLING SOLUTIONS	Skelair International Ltd is a leading distributor and supplier in the UK market for a number of International drilling equipment manufacturers. Currently Skelair represent Marini Quarries Group from Italy, TEI Rock Drills from the USA, and EMCI Group from France which include the SOMAC range of drilling rigs. Skelair can provide a solution to a range of drilling projects across a number of industry sectors such as quarrying, mining, civil engineering, ground investigation, geothermal or water well drilling, micropiling, ground anchoring, foundations and more, working with their International partners to give a best solution on a case by case basis. Skelair has a number of other suppliers of drilling products, consumables and accessories who they work with such as Wassara, Driconeq, Center Rock and Halco to give customers a complete range of options.
30	ZDS pump innovation	ZDS, headquartered in Padua, is specialized in the design and manufacture of 4" submersible pumps for water treatment and distribution; electric motors; electronic control systems and accessories. ZDS products are manufactured to ISO 9001 standards: to achieve the quality objectives, to be innovative and to meet customer requirements. From the very beginning, the company has been focused on the development of automatic and innovative complete solutions thanks to built in electronic protections that are ready to use, economical and easy to install. Innovative ideas have been supported by technical know-how and organizational skills gained from long-term experience which is rooted in the know-how of some historic manufacturers in the hydraulic field.
31	GeoSonic ON YOUR WAVELENGTH SINCE 2013 10 YEARS	Geosonic Drilling are a contractor operating Europe's largest fleet of multi-purpose Sonic Drilling rigs. Their reputation has been built with a focus on Technical excellence, quality, client support and project delivery at the forefront of every completed project. GeoSonic's BDA Audited rigs and crews have a proven track record of advancing boreholes through a vast array of ground conditions encountered throughout the UK and Europe for geo-environmental, geotechnical, water exploration, mineral exploration, specialist nuclear and renewable energy purposes both onshore and offshore. GeoSonic Drilling provide a wide range of services beyond simple Sonic Drilling, utilising the multi-purpose fleet combining Sonic Drilling with many traditional rotary techniques and including most kinds of in-situ geotechnical testing.
32	geoquip WATER SOLUTIONS	Geoquip Water Solutions (stand 32) is a leading supplier of borehole maintenance equipment and water treatment programmes. As Franklin Electric's UK strategic partner for groundwater products, Geoquip also works closely with other renowned industry experts including Laval Underground Surveys and Angus Flexible Pipelines. Its extensive range of specialist equipment includes borehole submersible pumps – including ATEX-approved pumps – downhole CCTV cameras and flexible rising mains, together with control panels, state-of-the-art telemetry and bespoke monitoring solutions. Talk to Geoquip's experts about the Franklin Electric High Efficiency System (HES), designed to achieve energy savings of up to 21%; and find out why the Franklin Electric E-tech Drive-Tech (DT) and DriveTech MINI (DTm) inverter are best for managing fluctuating water levels. Check out the latest range of Laval downhole cameras and discover how Geoquip's BoreSaver range of biodegradable water treatment solutions tackle the bacteria and residues which impact water quality and volume. For more information, visit www.geoquipwatersolutions.com.
33	Stuart Wells Limited	Stuart Wells is one of the UK's leading specialists in groundwater control systems for contractors to the civil construction industry. In addition, they undertake borehole testing including pumping tests to BS ISO 14686:2003 and permeability testing to BS EN ISO 22282 2012 standards. Borehole decommission in accordance with the EA guidelines is another area of their expertise. The next day supply of borehole installation materials, well screens, well covers (to the BS EN124 D400 standard), bentonites, pre mixed grouts (water not included), bespoke graded filter sands, sampling equipment including pumps and bailers and wax for your U100 tubes.

Stand	Company	Description
34	DRILLING SUPPLIES UK	Drilling Supplies UK has been established in the drilling industry for nearly 17 years and has become a trusted supply partner to many UK and overseas clients. They are a main UK supplier for all of your site investigation and geotechnical requirements, which includes installation pipework, bentonites, filter materials and much more. They manufacture all their own coreboxes to any size required and compliment this with huge stocks of plastic coreliners in a vast range of sizes to suit customer needs. They also have the added benefit of their own in-house engineering department which has up to date CNC lathes, from which they manufacture quality and cost -ffective tooling products and packages for rotary, mini sampling & cable percussion rigs. They keep large stocks of all standard products items for swift delivery to all of the UK and overseas and they can also mobilise with quick turnarounds, full wagon loads.
35	STRUCTURAL SOILS LTD	Established in 1964, Structural Soils Ltd has evolved into an award winning national, multidisciplinary, integrated geotechnical and geoenvironmental site-investigation company with the proven capability, capacity and confidence to undertake contracts of any size, in any location and virtually any scope. The company undertakes contracts across the UK through its offices in Bristol, Castleford, Coventry, Glasgow, Hemel Hempstead, Wigan, Plymouth, and Tonbridge. In 2020, they won 'The Big 3' Ground Engineering awards, Ground Investigation Specialist of the Year, Contractor of the Year, Ground Investigation Project of the Year. They were announced as the deserving winner of the Technology Team of the Year Award at the 2022 Construction News Workforce Awards. They now offer an independent downhole borehole logging, packer testing, HPD and NMR service. Structural Soils look forward to your visit to their Stand 35. For more information on their comprehensive service offering please e-mail ask@soils.co.uk.
36 & 42	rocscience	Since 1996, Rocscience has been a company focused on bridging the gaps in analysis, design, and visualization tools for the mining and civil engineering industries. Born as a spin-off company from the University of Toronto, their software development combines innovation and research, allowing them to develop world-class software solutions that work for you today and will evolve to meet your needs tomorrow. Their motto "Geotechnical tools, inspired by you" means they are continuously listening to your specific geotechnical challenges so that they can build tools to help you overcome them. Whether you're focused on slope stability, excavation design, or foundation analysis, their comprehensive suite of 18 programs means that no matter what your needs are, they have a software solution for your projects.
37 & 38	PROFOUND DRILL SOLUTIONS	ProFound Drill Solutions is a supplier of innovative engineered drill tips for foundation piles and anchor solutions, both standardized and customized. They specialize in the design, production, and supply of drill tips for each foundation pile technology and anchors and beams for anchoring different wall technologies. Their aim is to design, develop, and supply innovative engineered solutions that will reduce the time, energy, and cost of installation for their customers. Their strategy is centered around a spirit of problem-solving and flexibility. Their engineering team will quickly analyze their customers' specific needs and tailor a solution with a common end goal – i.e. a more efficient, lower-cost solution. Quite literally, you can build on ProFound Drill Solutions!
39	Drill Store UK Ltd	Drill Store UK LTD is a leading supplier of drilling equipment to the Mining, Quarrying, Site Investigation, Geotechnical, WaterWell, Piling and Exploration drilling market. Holding exclusive distributing rights to Boart Longyear, Halco RockTools and Monark Drill Steels products, Drill Store is one of the most trusted names in the industry. Established in 2007 and located just off Junction 29A of the M1, Drill Store is perfectly positioned to provide a quality service to their customers, offering quality products at competitive prices from stock next day or through collection from their warehouse. Across the two days Adrian Richardson and Ben Bradley from Drill Store will be exhibiting a wide range of different products. From DTH Hammers, Bits and Casing Systems together with Diamond products and Core Barrel Components. As well as answering any questions you might have a full range of Catalogues will be made available for you to take away.
40	VAN WALT equipment for soil and water research	Van Walt Ltd offers best-in-class equipment for environmental, water and soil research. Established for more than 40 years, they now operate from 7 offices in 3 continents and, over that time, they have built up considerable experience and expertise to become one of the leading equipment suppliers when it comes to soil research and testing; water level monitoring; water quality sampling: groundwater research and sensor to desktop Data Collection Telemetry systems. Highly versatile, secure and robust telemetry systems that, uniquely, bring together information from multiple sensor inputs, types and parameters to create solutions for single monitoring points to complex, integrated multi-parameter and multi-point installations. They offer support in planning your requirements; offering suitable solutions and cost effective datalogger options; site installation and after-sales support for the duration of your project. They recognise the work their customers do in protecting our natural resources and they take pride in supporting them.
41	soilmec Drilling and Foundation Equipment	For 30 years Soilmec Ltd have supplied new Drilling Rigs and Accessories to the drilling and foundation industry in the U.K and Ireland. The Soilmec range of machinery covers the field of foundations for piles, diaphragm walls, cased secant piling, micro piles, soil consolidation, tunnels, geothermal and also site investigation.
43	GIR	Ground Investigation Recruitment is run by a geologist with experience on both sides—recruitment and in the field. Experience that means they know exactly what is required and how to find the best person for the job. Their services also extend to recruitment for permanent positions including on-site engineers, office-based consultants, lab technicians, and senior management positions.
44	BOODE waterwell systems	Boode have been in the water well business since 1897 & producing high quality PVC Well Screen & Casing since 1950, supplying the land drilling industry domestically & globally since. Specialty products include BGP Gravel Coated Screens, BoodePac dual screens. Boode 'Select' PVC products are DWi Reg.31 & KIWA approved. Boode 'ecoline' is their low cost/high quality PVC range with BS6920 approval. Boode are also official UK & Ireland distributors for Johnson Screens for Stainless Steel Wire Wrapped Screens, Casing & Riser Pipes, Baroid IDP & Cebo drilling fluids & additives, American Manufacturing Mud Pumps & Spares, PASI well monitoring equipment, & kwik-ZIP centralisers.

Stand	Company	Description
45	SEP Geophysical	SEP Geophysical delivers a range of geophysical services to meet the growing demand for integrated, multi-technique datasets that are supported by sophisticated interpretation and associated post-processing. Their highly skilled geophysicists can undertake the design, acquisition, processing, and interpretation of data to deliver high-quality results that meet your specific application, using a broad range of skills that are vital in delivering high-quality geophysical surveys. Their services cover a wide range of applications, including: Voiding, sinkholes, subsidence, karst and solution features, Mine shafts, Adits or other mine workings, Disused quarries /Borrow pits, Rockhead profiling/engineering properties, Faults and Fractures, Underground storage tanks (UST's), Unexploded Ordnance (UXO's), Archaeology
46 & 47	zetica	Zetica is an industry leader in utilising non-destructive geophysical methods to assist with: targeting GI so that changes in ground condition can be characterised, mitigating the risk of unexpectedly encountering buried hazards like utilities, UXO, and buried obstructions, improving ground models for civil engineering design, measuring the state of repair of transport infrastructure, and monitoring degradation of the condition of infrastructure. They also carry out detailed desk studies to mitigate the risk of unexpectedly encountering UXO at the GI or construction phases of a project. Zetica is trusted by the UK's major infrastructure companies and consortia, government bodies like Homes England, HS2, Canal and River Trust, Network Rail, and the Environment Agency, and geotechnical consultants and contractors. They are the UK's leading independent provider of geophysical mapping services with experienced geophysicists having access to one of the largest equipment inventories in the industry.
48	TERRA SONIC INTERNATIONAL	Terra Sonic International represents more than three decades of Sonic innovation and more than 500 combined years of Sonic drilling experience. Terra Sonic International is the only sonic drill rig manufacturer in the world that is committed exclusively to Sonic drilling technology — Sonic Rigs, Sonic Heads, and Terra Sonic Tooling. Every TSi rig, head and tooling component is crafted by Sonic drilling experts who know what it takes for drillers to succeed.
49 & 50	GEOLABS	GEOLABS Limited are a wholly independent testing-only company which ensures that they can respond to clients' needs and requirements and are not influenced by any parent company considerations. Their testing is performed by staff with a combined total of over 500 years of soils testing experience. They ensure that the highest level of quality assurance is achieved and maintained in their operations and are accredited by UKAS for a wide range of tests including: advanced; effective stress; shearboxes; classification; earthworks; consolidation; permeability; total stress; tailings; thermal resistivity; rock tests as well as research orientated testing etc.
51 & 52	i2 Analytical	i2 Analytical are an independent leading testing laboratory, which performs a full range of chemical analysis using state of the art laboratory techniques on soils, waters, building and waste materials. i2 Analytical's UKAS accredited Geotechnical laboratory provides testing to BS and European standards. i2 Analytical can also provide insitu testing and sampling with its Geotechnical Site Services team from locations across the UK.. Their vision is to be the leading Global independent testing laboratory that offers the most comprehensive and multi-disciplinary services in environmental science and geotechnical sectors.
53	safety solutions ltd	EB Safety Solutions provide the very best advisory services to assist small and medium size companies with their health and safety requirements. Specialising in the construction and geotechnical sectors, their consultants combine a wealth of experience and knowledge with a common sense, practical approach to health and safety. EB Safety Solutions offer practical steps to protect people from risk and assist organisations to comply with health and safety law. They offer health and safety advice, assistance and training courses tailored to your needs and requirements.
58	jetmaterials	Jet Materials are a UK based company with over 40 years technical and sales knowledge providing a range of services and products to Civil Engineering and Education. Their main focus is Materials Testing Equipment, covering Soils, Concrete, Asphalt, Bitumen, Cement, Steel, Rock, Aggregates and general laboratory equipment. All of their equipment is compliant to EN, BS, ASTM or AASHTO standards. They provide total solutions including fully fitted mobile laboratories. They have extensive experience in Africa with agents in many countries. They are UK agents/ distributors for quality equipment manufacturers from Italy, Germany, USA, Sweden and Canada.
59	One Stop Testing Equipment Ltd	One Stop Testing Equipment are a UK based company providing a range of services and test equipment to the Construction Industry world wide. They supply educational engineering equipment for colleges and universities, design on-site and permanent laboratories for construction testing and supply bespoke temporary laboratory buildings in steel or traditional materials. They also provide complete Laboratory Test Sets with product codes and accessories to assist with specification and tendering and their experienced engineers can commission and install laboratories anywhere in the world. OSTE are also Pile Testing Equipment specialists with a large range of Pile Testing Equipment, plus they are UK Agents for Zorn, Instrotek, Piletest and many more.
60	AGS	The Association of Geotechnical and Geoenvironmental Specialists (AGS) is a not for profit trade association established to improve the profile and quality of geotechnical and geoenvironmental engineering. The membership comprises UK organisations and individuals having a common interest in the business of ground investigation, geotechnics, geoenvironmental engineering, engineering geology, geochemistry, hydrogeology, and other related disciplines.
61	BRITISH DRILLING ASSOCIATION	The British Drilling Association are a membership organisation for those who drill holes in the ground, manufacture / supply drilling rigs & equipment, or have a general or real interest in ground drilling. Whether it's mineral exploration, water-well activities, ground investigation, geotechnical processes, quarry drilling, geothermal & ground source heat drilling, directional drilling or other applications, their members cover it all.
62 & 63	FIELDERS Professional Recruitment	Fielders have been providing the highest calibre Ground Engineering professionals for 30 years this year. Fielders' service is YOUR service - whether you are a potential employer looking for expert sourcing in this niche market, or a candidate seeking professional, confidential and proactive representation to further your career. The super friendly London team work day-in and day-out with Site Agents, Rig Supervisors, Logging specialists, GeoEnvironmental Engineers, Designers – the full range of Geotechnical and GeoEnvironmental experts. The experienced Aberdeen offshore team focus on both Geotechnical and Geophysical Client Reps and well as Lab Techs and Geotechnical Logging support. This is our niche.

Stand	Company	Description
58	MARSHALL DRILLING	Marshall Drilling are an independently owned geotechnical and geo-environmental drill only subcontractor. Providing high quality ground investigations nationwide, to the UKs leading geotechnical consultancies and contractors, utilising their fleet of nine, modern low emission rotary rigs. Their specialist plant, including unique low ground pressure drilling rigs and support equipment, is in regular demand from the energy sector due to its ability to access the most remote of sites. Other specialist areas of business include accreditation for work on Network Rail and National Grid Infrastructure, pre boring for UXO risk mitigation, cathodic protection boreholes and borehole soakaways.
59 & 60	DAVIS trackhire	Davis Trackhire are the UK's Largest Independent Suppliers Of Aluminium Trackway, providing Temporary Access Roads, Site Compounds & Borehole Pads for SSSI sites in the Geotechnical and Site Investigation sector. They fully understand the importance of avoiding cross-contamination as well as the strict time restraints that are often in place in the GI industry. They have full wash facilities in all of their depots and can have 1 kilometre of clean Trackway installed and ready to use within just 24 hours of arrival on site, and removed just as quick - No need to for reinstatement and very little if any disturbance to the sub-soil.
61	TERRA INSIGHTS	Powered by the trusted and experienced brands RST Instruments, Measurand, 3vGeomatics, and Syscom Instruments, Terra Insights is a comprehensive platform of geotechnical, structural, and geospatial monitoring technology, along with purpose-built data delivery solutions. Terra Insights' monitoring technology can measure areas of interest at scale, from high-production mine sites to entire networks, such as railways, highways, and pipelines with a combination of geospatial, ground-based, and structural-based instrumentation. Their platform is also used to measure movement in airports, bridges, water dams, tailings dams, mines, and tunnels.
62 & 63	Stuart Wells Limited	Stuart Wells is the UK's leading specialists in dewatering and groundwater and ground remediation systems using wellpoint systems, deep wells, together with the supply of consumables to the drilling industry. Wellpoint dewatering systems are used to lower groundwater levels to provide stable working conditions in excavations. Wellpoint dewatering systems are particularly suited to dewatering in foundation pipelines runs and trench works.
64 & 65	STRUCTURAL SOILS LTD	Established in 1964, Structural Soils Ltd has evolved into an award winning national, multidisciplinary, integrated geotechnical and geoenvironmental site-investigation company with the proven capability, capacity and confidence to undertake contracts of any size, in any location and virtually any scope. The company undertakes contracts across the UK through its offices in Bristol, Castleford, Coventry, Glasgow, Hemel Hempstead, Wigan, Plymouth, and Tonbridge. In 2020, they won 'The Big 3' GE Awards, Ground Investigation Specialist of the Year, Contractor of the Year, Ground Investigation Project of the Year.

OUTDOOR EXHIBITORS

Stand	Company	Description
1 & 2	TerraRoc	TerraRoc is the market leader in geotechnical drilling consumables and they operate globally from Europe to South-Central-North America to Asia. With three manufacturing facilities in Finland (Tampere), Scotland (Grangemouth) and the United States (Roanoke, Virginia), in addition to a supply chain that spans the globe, they're able to minimize their clients' downtime and react promptly to their needs around the world. From specializing in casing advancement systems, down-the-hole hammers and core drilling, TerraRoc's strong R&D, thorough planning and exacting quality control enable them to deliver a full range of drilling tools and consumables. Their products and services are customized for each specific client's needs and with some of the industry's most robust R&D talent, TerraRoc is always on the lookout for new customer challenges.
3	MacGeo Geotechnical & Environmental	MacGeo is a specialist geotechnical drilling subcontractor working onshore, nearshore and offshore, in the UK and overseas. A UK-based independent provider offering the full range of specialist geotechnical and geo-environmental drilling services, including the most advanced and industry leading 150Hz Sonic drilling techniques. They work on behalf of main contractors and consultancies within the ground investigation, oil and gas, mining and civil engineering industries. MacGeo is completely unique in how they are set up, as they are a drilling subcontractor owned and managed by a team of geotechnical engineers, therefore their focus is always on delivering to the end client. They are one of only a few UK drilling subcontractors that has the ability 'in-house' to deliver a full-scale ground investigation of considerable size on behalf of their clients, both on land and overwater.
3A	Eijkelkamp Fraste UK	Eijkelkamp Fraste UK – Bringing the best of both companies to the UK. Eijkelkamp Fraste UK was established in 2019 and is co-owned by Royal Eijkelkamp & Fraste. Based in The Netherlands, Royal Eijkelkamp produce & supply products & services, offering a one-stop solution for Soil & Water Research. Royal Eijkelkamp are also the worldwide producer & supplier of Sonic Drilling Rigs, Sonic tooling & Sampling solutions. Fraste, based in Italy, have over 50 years of design and construction experience. This gives Fraste a strong & stable position in the international drilling industry. Designing & manufacturing quality Drilling Rigs that last have secured growth and supply around the world. Bringing the best of both companies to the UK, Eijkelkamp Fraste UK was created. They are innovative, forward thinking and committed to offering a wealth of knowledge, unrivalled after sales service & support.
4	Borehole Solutions Limited	Borehole Solutions Limited provide a comprehensive service to carry out detailed Geotechnical & Site Investigations to the highest standard throughout the UK to suit your requirements. With a diverse range of drilling rigs and equipment at their disposal, dovetailed with experienced, highly trained Engineers & Site Staff; they can tailor a Site Investigation to your specific needs. Their professional, dynamic, enthusiastic management team have just shy of 50 years' experience between them which also encapsulates all infrastructures, complying with the highest degree of industry compliance and health & safety without compromising quality or productivity.
5	JKS Boyles	JKS Boyles is a leading supplier to the drilling industry, from drilling rigs and wireline drilling systems to drill rods and diamond core bits. They carry large stocks of drill spares and drilling consumables that are available for immediate despatch from their extensive workshop facilities and maintained by their field service engineers. JKS Boyles offer repair and maintenance programmes to suit your requirements, along with extensive drilling support and training.
6	Stratum Drilling Solutions	Stratum Drilling Solutions Ltd offers a single source solution supplying industry leading products, service & support. They bring together all components of the drill string and offer a complete solution from the bottom of the hole right through to the rig itself. Each supplier has been chosen through their continued development of quality equipment, their focus on the customer and Stratum's own experience of working with their products. Large stocks located in the UK allow for a seamless supply no matter the application. With a wealth of knowledge on both the equipment and applications allow Stratum to work closely with the customer to find the perfect on site solution.
7	IN SITU SITE INVESTIGATION	In Situ Site Investigation is a specialist geotechnical and geo-environmental site investigation company, which specialises in the use of Cone Penetration Testing (CPT) techniques and other related pushing technologies. In order to provide their clients with the most accurate and reliable data, they use high quality and innovative equipment. By combining this with their highly trained field staff, quality reporting and quick response times, they believe that they can offer each client the specialist service they require.
8	DAVIS trackhire	Davis Trackhire are the UK's Largest Independent Suppliers Of Aluminium Trackway, providing Temporary Access Roads, Site Compounds & Borehole Pads for SSSI sites in the Geotechnical and Site Investigation sector. They fully understand the importance of avoiding cross-contamination as well as the strict time restraints that are often in place in the GI industry. They have full wash facilities in all of their depots and can have 1 kilometre of clean Trackway installed and ready to use within just 24 hours of arrival on site, and removed just as quick - No need to for reinstatement and very little if any disturbance to the sub-soil.
9	casagrande uk	Casagrande UK is the sole UK and Ireland distributor for Casagrande Spa of Italy, a company with over 40 years experience in designing and manufacturing machines and equipment for the ground engineering industry, known world wide for high performance and reliability. Casagrande UK is also the sole UK and Ireland distributor for equipment manufactured by Hutte, Eurodrill (Germany), Hany and Emde.
10	Rockbit uk	Rockbit UK ltd. is a major international manufacturer and supplier of Drilling Rigs, Drilling Bits and associated Drilling Equipment. Based on Tyneside in the United Kingdom with offices in Amman, Jordan, the company has 35 years experience of manufacture, contracting, service and supply within the Drilling and Mining industries. Rockbit UK provides a drilling consultancy service to its customers and prides itself on the reliability and quality of its products and service.

Stand	Company	Description
11	allied ASSOCIATES GEOPHYSICAL LTD	Allied Associates Geophysical Ltd return to Geotechnica in 2023 following a break forced upon the industry due to Covid. It is however interesting to see that activity in the Geotechnical sector peaked during this time highlighting the buoyant nature of Geotechnical Engineering and its associated sectors. 2023 marks their 35th year in the supply and support sectors for Geotechnical engineering, Geophysics, environmental engineering to name but a few and during this time, they have witnessed many changes in the sector, the applications, the users, but also the development of technology resulting in high-quality, high-resolution information from the sub surface. Notable changes include larger systems for faster deployment, improved data quality and resolution. Mag arrays for Solar field mapping, GPR arrays for large area Utility mapping are examples where technology advances are permitting the industry to keep up with client expectations. Come visit them at outside Booth 11 to discuss these changes and if they have a solution for your current requirements.
12	SONIC DRILLING SUPPLIES LTD	Founded in 2006 by Alan Hornsby; Sonic Drilling Supplies Ltd supports the UK drilling industry nationwide providing a full turnkey solution for drilling packages for hire, sale or rental purchase. They specialise in resonance/ vibro, rotary percussive, down the hole, driven and conventional drilling techniques. They provide a high level of service and detailed solutions to all of their customers supported by their vast hire fleet, world renowned agencies and dedicated team of staff. Their ability to provide not only the right solution but within a quick turnaround enables their customers to keep the tooling turning and their profits earning! Come check them out at the show and see what all the buzz is about at Sonic.
13	MARSHALL DRILLING	Marshall Drilling are an independently owned geotechnical and geo-environmental drill only subcontractor. Providing high quality ground investigations nationwide, to the UKs leading geotechnical consultancies and contractors, utilising their fleet of nine, modern low emission rotary rigs. Their specialist plant, including unique low ground pressure drilling rigs and support equipment, is in regular demand from the energy sector due to its ability to access the most remote of sites. Other specialist areas of business include accreditation for work on Network Rail and National Grid Infrastructure, pre boring for UXO risk mitigation, cathodic protection boreholes and borehole soakaways.
14	JUST DRILL .EU	Just Drill are the specialists in both sale and distribution of drilling equipment and tooling, providing a complete drill-string solution for sectors including Blast Hole, Geotechnical, Waterwell, Geothermal, HDD & Site Investigation. They cover the UK and Ireland markets and are known as the "Exclusive or Preferred Partner" for various high-quality manufacturers from around the globe. These include Robit Top Hammer, DTH & Casing systems, Perforator drill pipe and accessories, Glinik Rotary Bits, Montrae Mining Shock Absorbers, ExcaDrill attachments with additional products available within their portfolio. They are determined to provide an unrivalled service with a key focus on sustainability, which form part of their core values. With extensive market knowledge and worldwide experience, you can trust them to supply the right products at the right time for your projects. They are constantly bringing new technologies and methods to the industry.

EUROPEAN GEOPHYSICAL SERVICES

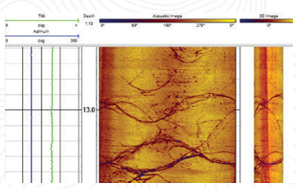

Follow us on LinkedIn

CHAS (H&S) CHAS

Vital sub-surface data to help you make more informed decisions

European Geophysical Services provide geophysical logging, imaging and video surveying of boreholes, adits, shafts and wells for the water, environmental, geothermal and civil engineering industries.

- Worldwide project experience
- Imaging and video surveying
- Qualified logging engineers
- Reliable data and reporting

SOIL ENGINEERING

CELEBRATING 60 YEARS

BACK TO SCHOOL

WITH **WORLD CLASS** GEOTECHNICAL TRAINING FROM EQUIPE

Health and Safety Courses

Delivered in partnership with RPA Safety Services

IOSH Safe Supervision of Geotechnical Sites (3 Days) - £495 + VAT
Learn in detail how to keep yourself and your on-site operatives safe in the field - industry SSSTS equivalent

IOSH Avoiding Danger from Underground Services - £175 + VAT
In accordance with the requirements and guidance set out within HSG47

Other Health and Safety Courses

Delivered in partnership with EB Safety Solutions & RPA Safety Services

MARGI - Managing & working with Asbestos Risk in Ground Investigation - £225 + VAT
Comprehensive guidance to deal with asbestos in a GI environment, including CAR 2012

Geotechnical Courses

Prof. David Norbury's Soil Description Workshop - £295 + VAT
Providing a detailed approach to soil description practices and techniques

Prof. David Norbury's Rock Description Workshop - £295 + VAT
Providing a detailed approach to rock description practices and techniques

Online and In-Classroom Geotechnical Courses

Delivered in partnership with Plough Geotechnical

Basic Foundation Design - £250 + VAT
Shallow foundation overview for geotechnical practitioners and engineers

Further Foundation Design - £250 + VAT
Complex & deep pile foundations for geotechnical practitioners and engineers

Earthworks Design and Construction - £250 + VAT
A general overview of materials sourcing / selection for design & construction

Slope Stability Design - £250 + VAT
Comprehensive overview for geotechnical practitioners and engineers

RHINO® COREBOX

AWARD WINNING SOIL & ROCK COREBOX

GROUND ENGINEERING AWARDS 2020 WINNER

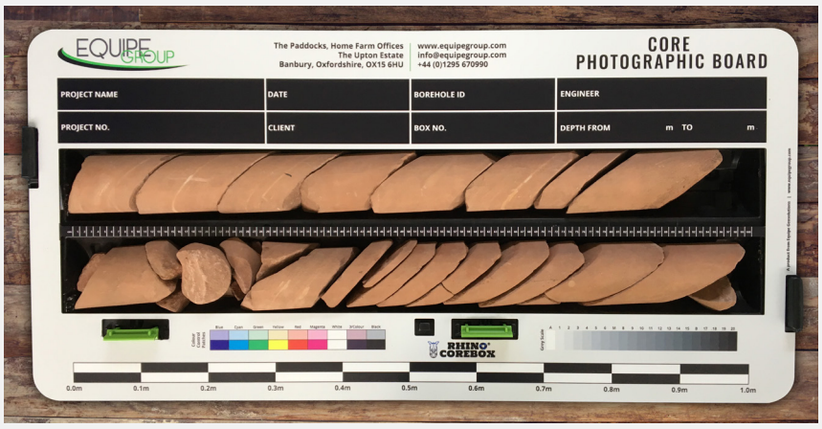

- ERGONOMIC DESIGN
- SAFELY STACKABLE IN MULTIPLE FORMATIONS
- BETTER CORE PHOTOGRAPHY
- EASIER TO LOG CORE
- WEATHER-PROOF & ROBUST
- RECYCLABLE
- SAVES SPACE DURING TRANSPORTATION & STORAGE
- EASY TO LABEL
- CUSTOMISABLE WITH COMPANY BRANDING

NOW AVAILABLE IN BOTH
1M DOUBLE CHANNEL AND 1.5M SINGLE CHANNEL BOX

VISIT EQUIPE GROUP STAND FOR MORE INFORMATION

ON-SITE Photoboards

TECHNICAL DETAILS

- Bespoke company branding & contact details
- Clear and concise labelling including: Project Name, Project Number, Hole Number, etc.
- Graduated 10mm scales
- Full colour comparison chart
- Made from durable, weather-proof material
- Wipe-clean surface

FROM JUST £95 + VAT PER BOARD

SIMPLER FASTER SMARTER GREENER

A PARTNERSHIP BUILT ON SOLID FOUNDATIONS

TerraRoc

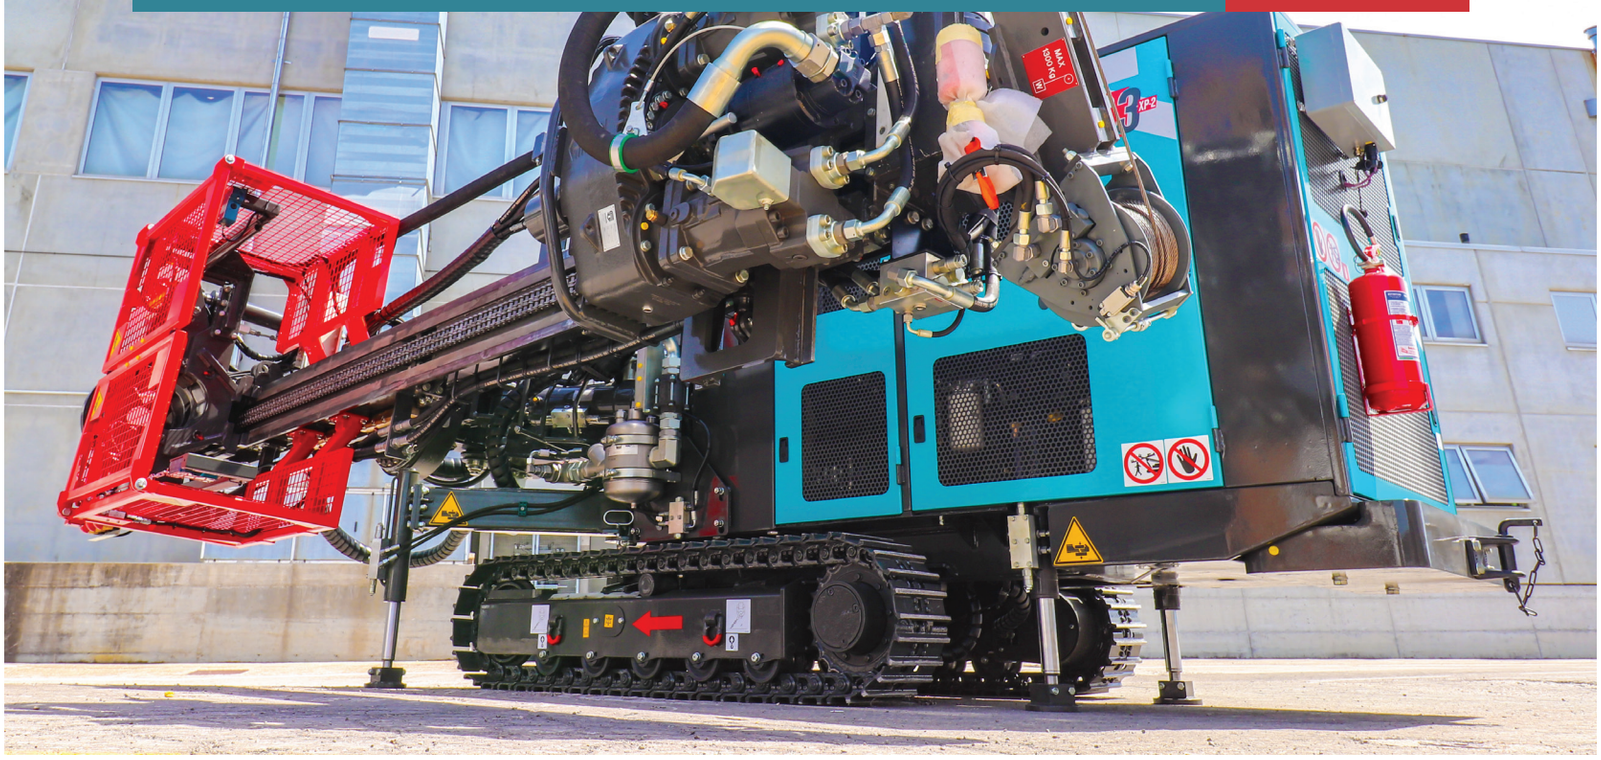

- CASING ADVANCEMENT SYSTEMS
- DOWN-THE-HOLE HAMMERS
- CORE DRILLING

Clients rely on TerraRoc for customized products and services to tackle all types of ground formation. After all, TerraRoc is the market leader in geotechnical drilling consumables, specializing in casing advancement systems, down-the-hole hammers, and core drilling. With a global reputation for innovation and specialized products, TerraRoc is the ideal partner for engineers to overcome the challenges of drilling, geotechnical works, and excavation.

For your next challenge share the load with TerraRoc.

casagrande uk

The **C3 XP-2** is Casagrande's smallest multipurpose drilling rig, designed for constructing anchors, micropiles and jet-grouting. As with the larger Casagrande rigs, the S**PM smart power management** and **full load sensing hydraulic system** allow intelligent engine power management to improve the drilling performance of the rig and reduce fuel consumption.

The rig is equipped with a **modular mast** and **double jointed kinematic mast support** making it small and simple enough to work in narrow spaces such as tunnels or inside buildings. The new C3XP-2 is compact, easy to transport and manoeuvre thanks to the ergonomically designed remote control console.
